

## **AMENDMENTS TO THE SPECIFICATION:**

Replace the Abstract with the following:

### **ABSTRACT**

A water purification apparatus having an inlet and an outlet, and at least one water purification device means thereinbetween, wherein the outlet includes at least a first and second water release valve means, the first release valve means being operable at a first flow rate, and the second release valve means being operable at a second flow, is described. Preferably, at least one water release valve means is operable at a relatively slow flow rate of generally up to 0.1 litre per minute, and at least one other water release valve means is operable at a relatively fast flow rate of, for example, up to 2 litres per minute. The present water purification apparatus provides the operator with the ability to very accurately obtain an exact volume of water desired.
